

Big Cob Seed Production

&

Quality Control Process

1. Big Cob Hybrids Selects products to sell in the upcoming growing season.

2. Through a network of independent seed growers Big Cob Hybrids contracts independent production of its hybrid seed.

3. After the hybrid seed is harvested it is tested for trait and genetic purity to ensure quality of the hybrids.

4. Seed is then sorted, cleaned, treated and bagged into Big Cob Hybrids Bags.

5. After the seed is bagged each bag lot is probed for seed quality and to ensure that the germ and trait purity was maintained through the bagging process

6. Once completed the bag is shipped to Big Cob for delivery to your farm.

“Big Cob Hybrids are guaranteed to meet or exceed industry standards for both warm and cold germs as well as trait and genetic purity. ”

Through our Purity Protection Promise we are willing to share all trait and genetic purities with you. It is your seed, you have a right to know what you're getting.
