

Big Cob Genetics and Traits

Genetic suppliers pool all available resources to create the best possible hybrid combinations.

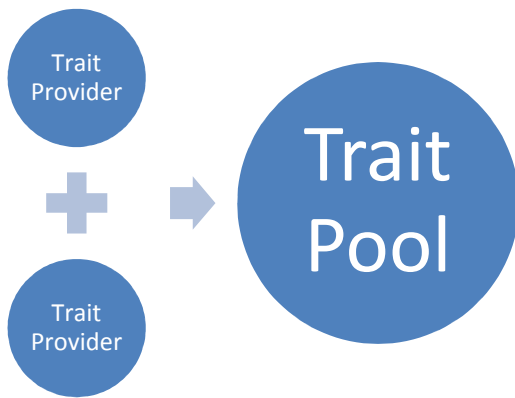

The best possible hybrid combinations are tested and evaluated to determine elite products to bring to market.

The genetic suppliers test these products in thousands of research plots across the Corn Belt to ensure that they are bringing only the most elite products to market.

With the help of consultants and information supplied by genetic suppliers Big Cob Hybrids selects the best hybrids from the genetics pool to be locally tested in its area.

Once Testing is completed Big Cob Hybrids selects the best products for its region and continues to evaluate these hybrids each year while also testing new genetic combinations so that we remain on the cutting edge of Genetics.

“The Best possible hybrids in the latest traits are selected by Big Cob Hybrids for sale in its specific geographic region.”

Trait providers license traits to Big Cob Hybrids to use on its available hybrids from the genetics pool.

Big Cob Hybrids pays fees to the trait providers for access to its line of traits.

Only specific trait + genetic combinations are available. (Trait conversions don't always work.)
